

Tèxtils.CAT presents the online training course of the European project HACKTEX

The program consists of various thematic blocks related to smart textiles and their applications in the market.

Tèxtils.CAT collaborates on the **HACKTEX** project, which aims to bring resilience, versatility, and innovation to the European textile sector by addressing gaps between academia and industry, emphasizing and highlighting the importance of smart textiles within the sector.

It does so through various innovative training materials, such as a best practices handbook, a bootcamp for students, and an open-access virtual learning platform (MOOC) focused on 5 modules, each with 3 units, covering all topics related to smart textiles: applications, opportunities, raw materials and components, production technologies, ecodesign, regulations, and legislation, among others.

You can access the course through the following link: <https://hacktex.eu/index.php/mooc/>
